

"Royal and White"

By LOUIE KAY

Things have been comparatively quiet on the home front for the past week or so, but are now beginning to look up. On Wednesday, March 25, comes the long awaited production of Mrs. Kemp's Dramatic Club. There will be two one-act plays: time is 8:00 p.m. Admission is 50¢. At long last, our curiosity will be satisfied: after hearing mysterious conversations, seeing peculiar pieces of scenery, and hearing the odd screams.

Monday, March 23, saw action between the Morris Junior Girls' basketball team and the Delia Junior girls. Delia's outstanding players were Ann Mark, Alice Eberle and Karen Kohler. Apparently, however, they weren't outstanding enough, since Morris triumphed with a score of 37-11. It was a good game though, and helped to improve the inter-school spirit which was slightly dampened when Delia won over Morris both times at their last games.

ALTA. FEDERATION OF HOME & SCHOOL ASSOC.

The 1959 Convention of the Alberta Federation of Home and School Associations will be held at the University of Alberta, Edmonton, May 12th to 15th, 1959. A registration of at least 40 delegates is expected, representing Associations as far north as Yellowknife and as far south as Coquit.

To spark the opening of the Convention, Mr. Sidney Katz of Toronto, Associate Editor of Maclean's Magazine, will address a public meeting held

in the Jubilee Auditorium on the evening of May 12th, on a topic relating to Home and School.

The Official Opening of the Convention will take place Wednesday morning, May 13, under the chairmanship of President R. H. Jescock, of Lethbridge.

Highlighting the banquet at the closing session will be an address by Mrs. P. A. Hansen of Calgary, a past president of the Alberta Federation, and a member of the Cameron Royal Commission on Education. Mrs. Hansen's topic will be "Roads to Understanding."

Delia Community Hall

At the regular monthly meeting of the Delia Community Hall Committee held on March 3, it was decided to order and have the kitchen and the kitchen and rest rooms. The Majestic-Parrell Lake W.L. donated \$50.00 towards the purchase of the kitchen sink. Mrs. Maude MacDonald advised that the F.W.U.A. had ordered and will pay for the sink, closet, etc. for the ladies' rest room in the hall. The executive of the Community Hall would like to thank everyone connected with the above organizations for their kind and rapid responses.

Rapid progress is being made in finishing the kitchen and rest rooms, and the hall is certainly a credit to the entire community.

A general meeting of all interested people in the community will be held on April 7th, in the hall, at 8:00 p.m. sharp. The executive is anxious to have as many citizens as possible in attendance.

Obituary

Mrs. A. Bolster

Passed away in the General Hospital, Calgary, on Sunday, March 15th, 1959, at the age of 83 years.

Deceased was born in Renfrew, Scotland, about the year 1876, and as a young woman emigrated to Canada, coming to Calgary in 1912, where she married her late husband, Mr. Geo. Bolster. They afterwards moved to Delia, and took up farming, which they carried on successfully until 1950, when they both retired to Calgary.

The late Mrs. Bolster leaves surviving one daughter, (Mrs. H. McFarland), and one grand-daughter (Mrs. P. A. Davidson), and one brother, who lives in Australia.

Funeral services will be held from Delia United Church on Tuesday, March 24th, at 2 p.m., with the pastor officiating, and a full choir in attendance.

Hymns sung, "O God Our City in Ages Past," and "Rock of Ages."

Solo by Mr. L. Turner, "The Lord is My Shepherd."

Interment—John Benton, Jack McCully, Bob Morrison, H. C. McCully, Stuart Sloan, and Andy Mason.

Whyle Funeral Directors of Hanna had charge of arrangements.

Delia W.M.S.

The Delia W.M.S. held their March meeting in the United Church annex, with sixteen members present. Opening by Mrs. M. "Beneath the Cross," followed with prayer by Mrs. Hawson. The minutes were read and approved.

A quilt top, made by the C.C.T., was displayed. The W.M.S. will supply the backing and filling, and a quilting date was set for Friday, April 10th.

The W.M.S. are invited to the Affiliation service Tuesday, March 24th, at 7 p.m.

Correspondence consisted of a letter from Peggy MacMillan, a thank-you note from Mrs. Peter Thompson, and a newspaper article was read on Mission work among our own Indians.

Supply Sec.—Mrs. Long read an article on the need for sheets in a Korean leather colony. A receipt for the sheets sent to Cold Lake hospital was read, and a letter saying toys were wanted for used toys for two or three years would be appreciated.

It was decided to send old sheets and pillow cases to be used for bandages. Any donations of these could be left at the annex before April 15.

Mrs. Whitman led in prayer for Peggy MacMillan. Christian Citizenship Sec.—Mrs. Taber read an article concerning our neighbors—The U.S., Alaska, and West Indies.

Literature Sec.—Mrs. Turner and Mrs. Wallace, keep a list of books read by members and encourage more reading.

Friendship Sec.—Mrs. Mill and Mrs. S. Sloan, reported 7 get well cards, 3 telegrams, and 1 new comer call.

The program by Mrs. Battle and Mrs. Taber, was a lesson on Mexico.

Roll call was a Bible verse containing the word "Glory." The meeting closed with singing hymn 311, and repeating the Magna Benediction.

A lovely tea was served by Mrs. Harris and Mrs. Long.

THE QUESTION OF PROTEIN GRADING

Once again the question is being asked in these quarters: "Is it feasible or desirable to grade Canadian wheat on a protein basis?"

From discussions on this subject, which have taken place from time to time, certain facts seem to stand out quite clearly for the first time in Canada, unlike the U.S.A., wherein almost all production of the wheat is sold annually. Not that there the protein level, as in the U.S.A., of wheat is variable, at a premium, high protein wheat to mix with soft wheats.

At the present time major importers of Canadian wheat, including Great Britain, are apparently not willing to pay a premium for protein, being content to accept the general run of what they are receiving on a regular grade basis.

Anything which might tend to disturb this situation would be seriously considered, since protein grading would most certainly involve a substantial change in the present grading system. The added danger, too, that it might indirectly place an "inferior quality" label on the balance of the crop which lies outside the high protein areas.

GRASSHOPPERS, 1959

The grass hopper for 1959, now released, shows that 6,500 square miles in the southern part of the province will be infested this year. This is an increase of 25 per cent over 1958. If the spring is early, warm and dry, damage can be expected throughout the area, reports J. B. Gurba, Alberta's Supervisor of Crop Protection and Pest Control.

Farmers should plan to follow heavily infested stalks. Spring tillage that destroys green growth at hatching time will starve the young hoppers.

Under the Department's control program, insecticides are developed to help control outbreaks. These chemicals are supplied at cost to farmers through municipal centers. Newer insecticides are more effective, and can be readily applied to large areas by field-type sprayers or airplanes. Young hoppers can be controlled at the chemical cost of about 15 cents per acre.

Further information may be obtained from the publication "Grasshopper Control in Alberta," which is available from any district agriculturalist.

U.S. Wheat Exports

The United States expects to export 480 million bushels of wheat in the current grain year, but is continuing to insist estimates. This is some 20 million bushels more than was predicted earlier and would be substantially above last year's total of 402 million bushels but still well below the 549-million-bushel record in 1956-57.

Increased programming under Public Law 480 is mainly responsible for this year's increase. Larger quantities are being taken by India, Brazil and Yugoslavia.

Say you saw it in "The Delia Times"

Local Demand Boosts Price

George Winkelaar, general manager of Alberta livestock co-operative, says high bid prices in Canada cannot be blamed on exports to the United States.

He was commenting on Alberta government statistics that show only about 600 head of slaughter cattle were exported from Alberta Jan. 1-17, compared with more than 5,900 for the corresponding period of 1958.

Mr. Winkelaar said Canada doesn't have the surplus of cattle this year, adding that with a shortage of livestock, it is only natural that prices will be higher.

Sunflower Varieties

Lethbridge Experimental Station Weekly Letter

S. H. PARLOW, Cereals. Two of the most suitable sunflower varieties for all soil conditions are Advance and Beacon. Both are dwarf varieties suitable for combine harvesting.

Advance is a uniform single-stem type plant with a strong stem and high oil content. One of its main defects is susceptibility to rust. However, since seedlings are being grown in this area for the second year only, no serious rust problem should result from rust which has been in the soil for the past few years. Advance is a hybrid made of an inbred and the Sunrise variety; therefore it is necessary to obtain new seed each year.

Beacon is a rust resistant variety. It lacks the uniformity of Advance, and averages about one bushel less than the other later in days to mature. When

Good Used Buys

1953—1 TON FARGO TRUCK. Wood Grain Box. Linden Hoist. Brand New Grip Tires on rear. Good Front Tires.

1952—1 TON FORD EXPRESS. Real good rubber. Excellent condition throughout.

1950—1 TON FARGO EXPRESS. Perfect.

1946—2 TON G.M.C. Good rubber. Perfect Box and Stock Racks. Very low mileage, and in excellent condition mechanically and not a mark on the body.

1953—OLDSMOBILE 2 DOOR HARD TOP. Automatic, Radio, Century Lights. Brand New Tires. New paint job.

1952—PONTIAC 4 DOOR SEDAN—RADIO A good running unit.

We need good used 1956—1958 Cars, and will pay premium prices.

Trade Now! for any of the General Motors family of quality Cars—Chevrolet, Oldsmobile, Pontiac, Buick, Vauxhall.

LARKIN & ISAAC

rust is not serious, its yield is similar to Advance. In a rust epidemic it greatly outclasses Advance and has higher oil content. The Monomita variety is susceptible to rust but is about three bushels more than Advance. The plant type varies from single stem to many branches, and from strong to weak stems. This characteristic makes it a little more difficult to harvest than the other varieties. It also tends to shatter

Canada's first electric railway was built in Toronto in 1883.

Tourist Branch gets humorous inquiry

From time to time the Saskatoon Government Tourist Branch receives humorous inquiries from persons interested in visiting the province.

One such inquiry was received recently from a visitor who lives in Wilkes, Idaho. The man asked for information on behalf of his sister who, according to the inquiry, wants to spend some time visiting in Saskatchewan. She showed with the letter was a photo of the dog.

The letter ran like this: "This letter, where picture I have enclosed, wants to go to Saskatchewan to hunt whistled grouse and prairie chickens. I want to go. For this reason I am eager to ascertain what the shooting was during the past season—1936. This may give me an idea as to the abundance or scarcity of prairie fowl in your province. Furthermore I shall be pleased to be advised where the better hunting seasons are in Saskatchewan."

The information has been furnished and Tourist Branch has expressed fine taste that the letter, and the picture, was a responsible time in Saskatchewan.

Superior Grade 12 students will be given recognition

A plan to give recognition and stimulation to academically superior grade 12 students in Saskatchewan has been announced by Prof. G. J. Langley of the College of Education at the University of Saskatchewan.

Top students will be selected from Collegiate Institutes, school superintendents and private schools to go to the University of Saskatchewan on April 23 and 24 to take part in academic competitions, and to be shown around the university. About 15 are expected to qualify.

At the university they will enter competitions in one of the following: history, mathematics, chemistry, physics. Those with highest achievement will be recognized at a banquet, with awards being "more honorary than monetary in value."

Prof. Langley, chairman of the university's High School Visitation Committee, says only a small part of the students' tour duties on the campus will be devoted to competitions.

The program for the remainder of the visit is designed to be interesting and educational, a reward for the student for visiting the right to represent his school or university in value.

He added that it is to be hoped students chosen to participate will look upon the project as an adventure promising fruitful experience.

The aim of the plan is to "encourage scholarly study by giving recognition to high school students of superior academic attainment, and to acquaint such students with opportunities for advanced study."

Selection of participants is left

up to the Collegiate Institute or school superintendents or private school authorities. However, the University of Saskatchewan suggests candidates should have an average of at least 80 percent and be in the habit of reading and studying beyond the requirements of the prescribed course.

The university also will supply examination papers that authorities might use in judging to determine their representative.

Board and room for the two days in Saskatoon will be provided through the university at one of its residence. Students who pass through Regina en route home will have a chance to visit the School of Art and Music Conservatory at Regina College.

TIME FOR CONVALESCENCE

After discharge from the sanatorium, the ex-tubercular patient should take a great deal of rest. Once having left the strict regimen of the hospital, the doctor's instructions should be followed carefully. It is unwise to try to catch up with social activities and to avoid the amount of exercise prescribed.

It is estimated that in 1938 corporation profits declined by about six percent from the previous year.

OUR BABY BOOM

If the number of new births is any indication—and most people would agree that it is—last year's economic setback did nothing to shake the confidence of Canadians in their future. The recession notwithstanding, more babies—close to half-a-million in all—were born in Canada in 1958 than in any previous year.

This is news to gladden the hearts of more than the nation or so fond parents directly concerned. Manufacturers of such indispensable as baby foods and powders, diapers and safety pins, layettes and carriages—to mention but a few—will be understandably delighted.

Likewise Ottawa, although its rejoicing that the number of prospective taxpayers is increasing at such a fast clip will doubtless be tempered by regret that they are not yet all grown up and at work.

The nation as a whole, of course, has good reason to welcome the arrival of nearly half-a-million infants in a single year. It stands to gain most of all. It will benefit immediately in that this population boost will, of itself, contribute to the small way to economic recovery. And it will benefit no less surely in the long run, for natural increase on this scale promises well for our national future.

There is added cause for satisfaction. While our birth rate continued to hold at around 28 per 1,000 of the population (one of the highest in the world), the national death rate fell below eight per 1,000 for the first time in Canadian history. Total number of deaths in 1958 (135,000) was nearly equalled—and, therefore, cancelled out—by the number of immigrants admitted during the year.

Making due allowance for emigration, our net gain in population in 1958 was almost 400,000—a satisfactory figure, all things considered. But it will be a matter for much gratification if we do even better this year.—Industry.

Local & District

Friday next, March 27th, is Good Friday.

Spring commenced March 21, according to the Calendar.

The weather continues dry, and mild, with bright sunshine. The temperature is 45 above at this writing.

Charles Leung, old-timer of Delia, is a patient in the Han-nah hospital.

Mrs. Rob Stinson has been visiting with relatives in Calgary for the past two weeks.

Russell Battie left Delia last week, to work in the Bank of Commerce at Glenora.

On Saturday next, March 28 there will be a going away party for Mr. and Mrs. Doug Morrison and family, who are moving to Grass Lake, where Mr. Morrison has obtained a position as agent in a U.G. elevator at that point.

A New Slant On Weather

The weather bureau says it will try its hand this summer at consulting and commenting on a regular basis the discomfort index.

And what's the discomfort index?

It is a term coined by a bureau scientist, Earl Thom, for a mathematical indication of the human discomfort caused by the combination of effect of temperature and humidity.

RADIO

The following are among the high lights of programs to be heard over CBO stations on Thursday, Friday, Saturday and Sunday, March 26, 27, 28, and 29. All times mentioned are Mountain Standard Time.

FRANK TODD — DELIA

Alberta Champion

The Edmonton Branch of the Northern Alberta Dairy Pool has won the Andrew Clement trophy for the best exhibit in all butter classes at a Scottish Dairy Show, held earlier this month in Glasgow.

Bruce Marshall, Canadian Agriculture Commissioner in London, England, advises that the trophy was won with an entry in the increased salted butter class. In addition to the salted and unsalted classes for home produced cream-

ery butter, the Glasgow show offers classes for butter produced in Commonwealth countries. James A. Kirkwood, O.B.E., from the West Scotland Agriculture College judged the championship class.

Hon. L. C. Halpin, Minister of Agriculture in Alberta, has extended his congratulations to the Edmonton firm for the outstanding win in the show.

Canada has about 55,000 miles of paved highway and about 44,000 miles of main-trunk railway line.
